Measured on 2023–2025 hindcasts: on average 42% of the top 20 segments lost at least the threshold within 28 days, versus 4% for 'it eroded recently' (persistence); difference +38.2% (95% CI +30.6% to +46.7%).

Tiers: **Watch** = in this top-20 list. **Warning** = high risk plus retreat on the latest pass; it reaches households only after an official approves it on the dashboard. Raw risk maps stay with officials and partners; public views are aggregated to union level.

Data: Copernicus Sentinel-1 GRD (ESA), descending track 150, ~05:56 local time; banks traced on 10 m water masks. Reasons describe what the model used, not proven causes. Segments not seen on the latest pass carry no forecast.
